

General Assembly Economic and Social Council

Distr.: General
17 May 2010

Original: English

**General Assembly
Sixty-fifth session**

Item 23 (a) of the preliminary list*

**Groups of countries in special situations: Fourth
United Nations Conference on the Least
Developed Countries**

**Economic and Social Council
Substantive session of 2010**

New York, July 2010

Item 6 (b) of the provisional agenda**

**Implementation of and follow-up to major
international United Nations conferences
and summits: review and coordination of
the implementation of the Programme of
Action for the Least Developed Countries
for the Decade 2001-2010**

Implementation of the Programme of Action for the Least Developed Countries for the Decade 2001-2010

Report of the Secretary-General

Summary

The present report is submitted in compliance with General Assembly resolution 64/213, in which the Secretary-General was requested to submit a report on the further implementation of the Programme of Action for the Least Developed Countries for the Decade 2001-2010, including the state of the substantive, organizational and logistical preparations for the Fourth United Nations Conference on the Least Developed Countries. It is also submitted in compliance with Economic and Social Council resolution 2009/31, in which the Secretary-General was requested to submit an analytical and results-oriented progress report on the further implementation of the Programme of Action.

* A/65/50.

** E/2010/100.

1. The present report is submitted in compliance with General Assembly resolution 64/213 and Economic and Social Council resolution 2009/31, in which the Secretary-General was requested to submit a report on the further implementation of the Programme of Action for the Least Developed Countries for the Decade 2001-2010 (A/CONF.191/13, chap. II), adopted at the Third United Nations Conference on the Least Developed Countries, held in Brussels in May 2001 (hereinafter referred to as the “Brussels Programme”).¹

2. The first section contains a report on the preparations for the Fourth Conference on the Least Developed Countries. The second section provides an overview of the progress made towards the international goals and targets contained in the Brussels Programme, which will feed into the preparations of the Fourth Conference. The latest available data on the goals and targets are provided in the annex. The third section examines responses of the least developed countries to the financial and economic crisis and is followed by conclusions.

I. Preparations for the Fourth United Nations Conference on the Least Developed Countries

3. As the focal point for the Fourth United Nations Conference on the Least Developed Countries (hereinafter referred to as the “Fourth Conference”), in accordance with General Assembly resolution 63/227, the Office of the High Representative for the Least Developed Countries, Landlocked Developing Countries and Small Island Developing States (hereinafter referred to as “Office of the High Representative”) continues to play a key role in mobilizing United Nations system-wide support and contributions for the Conference. To guide and facilitate the preparatory process for the Conference, the Office of the High Representative has prepared a concept note and a road map. The concept note spells out the organizational approach, mandates and specific activities to be undertaken in the preparation for the Conference at the country, regional and global levels. It also highlights challenges facing the least developed countries, including high levels of poverty, lack of diversification and weak productive capacities, as well as the challenges posed by the multiple crises of food and energy, and the global financial and economic crisis.

4. In its resolution 64/213 the General Assembly welcomed the offer of Turkey to host the Fourth Conference and set the dates for the two preparatory committee meetings, the first to be held from 10 to 14 January 2011 and the second from 18 to 25 April 2011.

5. Given that the Conference is a major undertaking of the entire United Nations system, the Office of the High Representative has initiated consultations with various Secretariat bodies, including the Office of Legal Affairs, the Department of Public Information, the Department for General Assembly and Conference Management, the Department of Safety and Security, the Office of Information and Communications Technology and others to consult on the preparation of the host country agreement. Consultations with the Government of Turkey on the agreement

¹ The present report was prepared with the cooperation of all United Nations system organizations.

as well as the logistical and substantive organization of the Conference have also started.

6. Furthermore, the Office of the High Representative has stepped up its advocacy work for the least developed countries in preparation of the Fourth Conference. Several newsletters have been published, seminars have been organized and a dedicated website was launched, which is providing regular updates on the preparatory process.²

Intergovernmental preparations

7. The preparatory process for the Conference has been underpinned by a bottom-up approach, starting with the country-level preparations feeding into regional- and global-level preparations. Broad-based national-level consultations were launched successfully in 2009 with the support of United Nations resident coordinators, involving a broad spectrum of stakeholders, including Governments, parliamentarians, civil society and private sectors. These consultations culminated in a results-oriented, analytical and forward-looking report on the implementation of the Brussels Programme. As of 30 April 2010, nearly 30 least developed countries have submitted their national reports. The national-level preparations fed into the regional-level preparations.

8. As decided by the General Assembly in its resolution 63/227, two regional preparatory meetings for the Fourth Conference were convened. The first regional review meeting — the High-level Asia-Pacific Policy Dialogue on the Brussels Programme of Action for the Least Developed Countries — took place at the ministerial level. It was hosted by the Government of Bangladesh in Dhaka from 18 to 20 January 2010 and organized in cooperation with the Office of the High Representative and the Economic and Social Commission for Asia and the Pacific. The Asia-Pacific least developed countries attended, including Yemen, as well as other member States and major stakeholders of the Brussels Programme, including the United Nations system, relevant regional organizations, development partners, private sector representatives and civil society organizations. The meeting adopted the Dhaka outcome document, which was endorsed by the Commission at its sixty-sixth annual session, held in Incheon, Republic of Korea, in May 2010.

9. The second regional preparatory meeting was organized jointly by the Office of the High Representative, the Economic Commission for Africa (ECA) and the United Nations Development Programme (UNDP) Regional Bureau for Africa. It took place in Addis Ababa on 8 and 9 March 2010 at the ministerial level and was attended by Government officials from 25 African least developed countries, including parliamentarians, civil society organizations, private sectors, bilateral and multilateral partners as well as regional organizations. The Africa Regional Preparatory Meeting was preceded by the civil society gathering on the review of the implementation of the Brussels Programme, jointly organized by the Office of the High Representative, ECA and LDC Watch, in Addis Ababa on 4 and 5 March 2010. The outcome of the civil society gathering was presented to the Africa Regional Review meeting. The outcome of the Africa Regional Preparatory Meeting was endorsed by the Third Annual Joint African Union Conference of Ministers of

² Available from <https://www.un.org/wcm/content/site/ldc/home>.

Economy and Finance and the ECA Conference of Ministers of Finance, Planning and Economic Development, which took place in Lilongwe on 29 and 30 March 2010.

10. The outcome documents of the two regional review meetings concluded that, while progress had been made in some areas of the Brussels Programme of Action, the implementation of the Brussels Programme of Action remained an unfinished agenda and the goal of poverty reduction illusive. Moreover, the gains made by the least developed countries were being eroded by the multiple crises of food, energy and climate change, and the current global financial and economic crisis. Against this backdrop, the meetings called for a strengthened and enhanced global partnership for least developed country development. This partnership must bring focused attention to:

- (a) Strengthening productive capacities to build resilience and reduce the vulnerability of the least developed countries to external shocks;
- (b) Promoting agricultural development to reduce hunger and ensure food security;
- (c) Strengthening resource mobilization and targeting aid to productive sectors;
- (d) Improving market access;
- (e) Developing infrastructure;
- (f) Managing climate change and ensuring a new green deal for the least developed countries;
- (g) Ensuring universal access to essential services and accelerating progress towards the Millennium Development Goals.

11. The United Nations system organizations and other stakeholders need to ensure that the outcomes of the national- and regional-level preparations are carried forward during the preparatory process.

Coordination of United Nations system-wide preparations

12. The Office of the High Representative, in consultation with the organizations and agencies of the United Nations system and other international organizations, has also finalized the list of thematic pre-Conference events to be organized by various United Nations agencies and organizations. The first event was jointly organized by the United Nations Industrial Development Organization and the Office of the High Representative in Vienna on 3 and 4 December 2009 on the impact of the global financial and economic crisis on the least developed countries' productive capacities and trade: threats and opportunities. The resulting Plan of Action has the objective "to achieve economic diversification among least developed countries in order to enhance food security and productive capacities and to reduce vulnerability to external shocks". This would be implemented with a two-pronged approach that would concentrate on policy, strategy and research on the one hand, and demonstration projects related to the research work, on the other. The outcomes of the pre-Conference events will form important substantive inputs to the outcome document of the Fourth Conference.

13. In addition, several United Nations system organizations have been cooperating with the Office of the High Representative in the preparation of expert meetings. Least developed country concerns have been discussed at various forums within and outside the United Nations system. The Office of the High Representative organized two interagency consultative group meetings during 2009 to coordinate the United Nations-system activities.

14. The United Nations system and other international organizations should reinforce their contributions towards the preparations for the Fourth Conference and ensure the participation of all relevant stakeholders, especially from least developed countries, in these activities.

Civil society involvement

15. To ensure participation by a broad spectrum of stakeholders in the Conference, the Office of the High Representative held numerous consultations with civil society representatives, especially from the least developed countries, to mobilize civil society input into the preparatory process and the Fourth Conference. A concept note has been prepared to guide civil society participation and substantive contributions to the Conference, and to set the structure for the civil society track.

16. The preparation and implementation of the civil society activities for the Fourth Conference will be overseen and directed by a Steering Committee. A secretariat will be established to facilitate, implement and follow up the decisions of the Steering Committee. The Steering Committee will meet at least four times during the preparatory process. Two of the meetings will be scheduled to coincide with the meetings of the Preparatory Committee.

Partnerships with other key stakeholders

17. Given the important role that parliaments play in implementing international commitments, the Office of the High Representative has also initiated consultations with the Inter-Parliamentary Union to mobilize parliamentary involvement in the Fourth Conference. A guide on mobilizing parliamentary support for the Brussels Programme was issued jointly with the Union. Parliamentarians participated in national and regional reviews, and a separate parliamentarian forum will be organized during the Fourth Conference. This should help in strengthening parliamentary ownership in the follow-up and implementation of new international support measures.

18. Preparations for the active involvement of the private sector in the preparatory process have also started. As the private sector plays a pivotal role in the structural transformation of the economies of the least developed countries, especially with respect to enhancing productive capacity and diversification, it is important to identify concrete, action-oriented proposals addressing specific problems of the least developed countries and challenges in the area of investment, enterprise development and finance. To this end, a forum on investment for least developed country development is being planned.

Resource mobilization

19. The Office of the High Representative prepared a project document to mobilize resources to support the substantive preparations for the Fourth Conference. Following the submission of the document, the High Representative initiated consultations with representative donor countries, emerging donors and international organizations to mobilize resources for the Fourth Conference and its preparatory activities. It should be noted, however, that the response by member States as of April 2010 has been muted, with the notable exception of India and Turkey.

20. Given the importance of adequate financial resources for the successful preparation and organization of the Conference, donors should provide timely and adequate financial resources to the Trust Fund for the Least Developed Countries to support the substantive and logistic preparation for the Conference.

II. Progress in achieving the internationally agreed goals and commitments of the Brussels Programme of Action

Commitment 1

Fostering a people-centred policy framework

21. Despite a decline from the record 8.4 per cent in 2007, the average growth of gross domestic product (GDP) in 2008 in the least developed countries was still relatively high, reaching the target of 7 per cent. However, there remain huge differences, with 11 countries exceeding the 7 per cent target, 10 of which are in Africa. By contrast, 12 countries experienced growth below 3 per cent, with only 1 in Asia and the others in Africa, the Pacific and the Caribbean. GDP growth of African oil exporters well exceeded the target, with an average of 9.6 per cent, but was down from 13.1 per cent in 2007, driven by the oil price drop in the second half of 2008. Interestingly, African non-oil exporters even increased GDP growth slightly from 6.6 per cent in 2007 to 6.8 per cent in 2008.

22. By contrast, GDP growth in Asian least developed countries dropped by almost two percentage points to 5.2 per cent in 2008. In the Pacific GDP growth dropped from 7.4 per cent in 2007 to 3.5 per cent in 2008. This was driven in part by the increase in transport costs, which started to affect tourism, and the decline in GDP in Samoa, which was hit by a tsunami. Average GDP growth of the least developed countries in 2009 is estimated to be only half of the average for the period from 2000 to 2008.

23. Per capita GDP in real terms in the least developed countries increased at around the same pace as the average for all developing countries, from \$327 in 2000 to an average of \$467, with wide variations among individual least developed countries. In several least developed countries, especially in Africa, per capita GDP even declined over the period, driven by both low GDP growth and relatively high population growth rates, which still averaged 2.7 per cent in 2008. The main channel through which GDP growth and poverty reduction are linked is through employment creation, especially in the form of decent work, but data are very scarce for the least developed countries.

24. Still more than half of the population of the least developed countries lives below the poverty line identified in Millennium Development Goal 1. The latest available data show that in 60 per cent of the least developed countries extreme poverty affected more than 50 per cent of the population and only six countries experienced poverty rates of less than 30 per cent.³ However, there has been significant progress in poverty reduction in 17 of 24 countries for which data exist.

25. Poverty is closely related to hunger and there has been a corresponding reduction in the number of least developed countries with very high rates of undernourishment. In no Asian least developed country for which data exist does undernourishment exceed 45 per cent of the population, which largely corresponds to the poverty figures. Recent research reconfirms a strong association of hunger and gender inequality, especially in education, but also in health provision.

26. Many least developed countries are net food importers, which increases their vulnerability to drops in export earnings and capital inflows. For example, imports accounted for more than 30 per cent of grain supplies in 12 African least developed countries. Nearly half of the least developed countries are considered by the Food and Agriculture Organization of the United Nations as experiencing a food crisis requiring external assistance or being at risk of crisis owing to high commodity prices, which are likely to remain higher and more volatile than in the past decade. Given the increasing importance of biofuels, even an increase in cereal yields may not necessarily reduce prices, as grain prices might be determined by oil prices in the future. Thus, there is an urgent need to focus more on the agricultural sector, which is discussed under commitment 4.

27. The very limited progress with regard to poverty reduction and high risk of falling into poverty highlights the need not only for creating employment and increasing agricultural productivity but also for stepping up social protection with a focus on strengthening human capacities in most least developed countries. Currently, their expenditure on social protection is among the lowest in the world. Measures that have been successfully introduced in some least developed countries include school feeding programmes, cash for work, targeted transfers and risk insurance related to agricultural production and health. The factors that lead to the success of such measures need to be understood better and best practices should be shared among the least developed countries.

Commitment 2

Good governance at the national and international levels

28. As the prime responsibility for their development lies with the least developed countries and ownership is a core element of the Brussels Programme, developing capacities of Governments is critical. In most least developed countries appropriate institutional arrangements may not be in place, mechanisms for fostering leadership development are weak, incentives for attracting and retaining qualified professionals

³ The results now available from the 2005 International Comparison Programme provide the first set of global purchasing power parities (PPP) since 1993 for the calculation of international poverty estimates by the World Bank. Work on revising the international poverty line to \$PPP1.25 and recalculating poverty estimates for low- and middle-income countries has now been completed.

in key institutions (including from the diaspora) are lacking and participatory mechanisms for constituency engagement are limited. Good governance is a broad concept in the Brussels Programme, ranging from the promotion of human rights to social inclusion and empowerment, but it contains no explicit targets related to governance.

29. Tax revenue is a crucial precondition for functioning Governments. In most least developed countries the ratio of tax revenues to GDP has been very low, with five countries even reporting rates below 10 per cent and nine countries showing rates from 10 to 15 per cent in recent years, of 18 countries for which data exist for 2002 to 2008. However, in some countries there has been progress with regard to increasing Government revenue in the past few years, driven in part by high commodity prices.

30. **To reduce dependency on foreign aid, the share of Government revenue to GDP should be increased through reforms of tax collection and more taxation of luxury consumption and the informal sector, as has been introduced by Senegal.** Likewise the Government of Bangladesh has taken measures to increase domestic resources through better compliance, collecting arrears and extending the value-added tax (VAT). It plans, inter alia, to introduce full automation of tax and customs administration, shorten the list of tax exemptions, expand the existing tax base and improve and strengthen the monitoring of tax collection.

31. Combating corruption is crucial for increasing the effectiveness and transparency of Government expenditure. To date, 32 of 49 least developed countries are States parties to the United Nations Convention against Corruption and 6 are signatories. Haiti, the Lao People's Democratic Republic and Timor-Leste ratified the Convention in 2009. Of the least developed countries that are States parties, 14 completed the original Convention self-assessment checklist, which considered 15 articles of the Convention. Only Bangladesh has completed the Convention compliance and gap analysis, which is a compliance review that compares national anti-corruption legislation and practice with the Convention and determines the extent to which the country complies with Convention requirements.

32. The extractive industries transparency initiative, which was endorsed by the General Assembly in 2008, is also gaining momentum in the least developed countries. Fifteen least developed countries have been candidate countries as of April 2010, having completed the sign-up phase and working towards full implementation of all initiative principles and criteria. Liberia is the first least developed country that was evaluated as initiative-compliant on 14 October 2009. Sierra Leone and the Democratic Republic of the Congo disclosed mining revenues for the first time in 2010.

33. Likewise, some least developed countries have made progress in addressing gender issues in their second and third generations of poverty reduction strategy papers by involving gender equality advocates in policy dialogue mechanisms for the elaboration and monitoring of the papers and making poverty diagnosis more gender sensitive. Fourteen countries have been undertaking gender responsive budgeting initiatives, including gender in national planning processes, developing

gender sensitive indicators to monitor budget processes and gender responsive budget allocations to address women's priorities.⁴

34. As of April 2010, 16 least developed countries exceeded the world average of 20 per cent women in national parliaments, with 6 even exceeding 30 per cent, which is considered an important threshold to influence politics. Rwanda has the highest number of women parliamentarians worldwide since the election in September 2008, with 56 per cent of seats. In Nepal a positive discrimination policy has been adopted to increase representation of women and other disadvantaged groups in the civil service and the political, economic and social spheres.

35. The availability of timely and reliable data is a precondition for policy planning and monitoring. It is also crucial for ensuring accountability by development partners and stakeholders. Although there has been some progress made, especially for statistics related to Millennium Development Goal indicators, for 9 of the 30 goals and targets of the Brussels Programme, no data are available for more than 25 per cent of countries, especially in the Pacific islands. Thus, the challenge of building effective in-country capacity to produce better policy-relevant data remains huge.

36. While there has been some progress with regard to democratization during the last decade in many least developed countries, unconstitutional changes in Government in those countries have started to increase recently, with three countries in West Africa and two other least developed countries experiencing coups d'état from 2008 to early 2010. All recent coups d'état in Africa have been condemned by the African Union and participation by their leaders in African Union activities has been suspended until the effective restoration of constitutional order. The African Union also stresses the importance of democratic norms in this context.

37. While there has been some progress with regard to good governance in many least developed countries, the capacity of Governments to develop and implement home-grown development strategies needs to be further improved. **In this context more voice and participation of least developed countries in international decision-making as well as improved coherence of donor policies is crucial to avoid a deterioration of external conditions, which might counteract efforts towards sustainable and inclusive development made by the least developed countries themselves.**

Commitment 3

Building human and institutional capacities

38. Human capacities are an important precondition for sustainable development and are at the centre of the Millennium Development Goals. Thus, the Brussels Programme also has a number of goals and targets focusing on education, health and other social services.

39. Most least developed countries are making rapid progress towards achieving universal primary enrolment. The number of countries with enrolment ratios below 65 per cent fell from 16 in 2000 to 4 in 2008. However, there are some indications

⁴ The 14 countries are Afghanistan, Burkina Faso, Ethiopia, Haiti, Mozambique, Nepal, Niger, Rwanda, Senegal, Sierra Leone, the Sudan, Timor-Leste, Uganda and Zambia.

that the rate of progress is slowing. In addition, in many least developed countries a large percentage of children do not acquire basic literacy and numeracy skills, even when they complete a full cycle of primary education.

40. Inequalities with respect to wealth, gender, ethnicity, language and location are now considered one of the major barriers to universal primary education and require a change in attitude. For example, pastoralists in African countries rarely have a chance to attend school on a regular basis. The effects of extreme poverty, which often result in child labour, also prevent access to education unless the education system takes the special needs of these groups into account.

41. Many least developed countries have removed school fees, but there is also a need to reduce indirect costs and to increase spending on schools and teachers to accommodate larger numbers of students without jeopardizing quality. Bangladesh and Cambodia have made progress by providing stipend programmes for marginalized groups. Zambia's success in increasing primary school net enrolment to 97 per cent in 2008 from 69 per cent in 2000 has been attributed to free basic education, re-entry policies, community school education, adult literacy and the school feeding programme.

42. Almost all least developed countries for which data exist have increased adult literacy over the past decade, reaching an average rate of 58 per cent, and have reduced related gender imbalances. To accelerate progress, Burkina Faso has scaled up the budget for literacy from 1 per cent to 7 per cent of the education budget. This is a positive step in a country where 50 per cent of the youth from 17 to 22 years of age have completed only two years of schooling.

43. The majority of least developed countries have made substantial progress in reducing infant and child mortality rates. Infant mortality was reduced by 27 per cent from 1990 to 2008, to an average of 82 per 1,000 infants. By current estimates, 12 countries have achieved, or are on track to achieve, the goal of fewer than 35 infant deaths per 1,000 live births. Child mortality was reduced by 28 per cent from 1990 to 2008, to an average of 129 per 1,000 children. However, this is still almost double the rate for all developing countries. Child mortality rates over 100 were observed in most African least developed countries and Afghanistan, while progress with regard to child mortality has been accelerated since 2005 in several African countries owing to the improvement in nutrition.

44. Progress with respect to maternal health has been mixed. Fifteen least developed countries (including all five Pacific least developed countries) have 60 per cent or more of births attended by skilled personnel, but only two have already reached the target of 85 per cent. Changes have been small and in some countries skilled birth attendance even declined, resulting in a very low average of 38 per cent. By contrast, in 19 countries 85 per cent or more pregnant women receive antenatal care, with an average of 64 per cent. Likewise, most least developed countries show at least moderate increases in contraceptive use.

45. While limited data have made it difficult to measure trends, there are some indications that as many as 21 least developed countries are making some progress towards reducing maternal mortality, while 24 appear to be making little or no progress and some even experienced a negative trend in the period from 1990 to 2005, making it one of the Millennium Development Goals for which progress has been slowest. Most of the stagnation occurs in the countries which already

experience the highest rates of maternal mortality, predominantly located in Africa, but also including Afghanistan. In addition to further improvements in health-care provision, major improvements in nutrition, sanitation and empowerment of women will be needed to make significant progress towards the target, especially in rural areas.

46. Declines or stable trends in HIV prevalence are now estimated in 25 of 35 least developed countries for which trend data are available. However, there are pronounced intra- and interregional differences. In Asia the epidemic has largely been confined to below 1 per cent prevalence. The highest rates are still found in the countries of southern and eastern Africa, with prevalence rates over 10 per cent in four of them.

47. Changes in behaviour, such as increased use of condoms in almost all least developed countries for which data exists as well as considerable investments in prevention, treatment and research, appear to have ensured sustained long-term reduction in HIV mortality and infection, and must be continued to further reduce new cases in higher-prevalence countries and prevent the spread of infection in countries with low rates. Women's networks are increasingly participating in HIV/AIDS policy formulation and have increased access to related resources and services in Cambodia, Liberia, Rwanda, Sierra Leone and the Sudan.

48. High prevalence of malaria (100 or more cases per 1,000 population) is found in 30 least developed countries, mainly in the Pacific and in Africa.⁵ Prevention programmes for malaria in Africa are making significant progress and drug treatment is improving. All least developed countries with a high burden of tuberculosis — except Afghanistan — also have a high burden of malaria, entailing additional challenges. Tuberculosis prevalence and death rates have declined substantially in some countries, but the number of countries with high prevalence remains high at 24 in 2008, while the number with high death rates declined sharply from 24 to 10.

49. In almost all least developed countries more than 60 per cent of the urban population has access to improved drinking water, whereas such access is enjoyed by the rural population in only half of them. By contrast, access to improved sanitation is low in both urban and rural areas. However, progress in access to sanitation is faster in rural areas. Water pollution is a growing concern in countries such as Bangladesh, where up to 70 million people are exposed to water that contains more than the threshold value of 10 micrograms of arsenic per litre established by the World Health Organization.

50. Access to water and sanitation is determined not only by the allocation of resources but also by growing demand owing to demographic factors and increased use by the private sector. Regulations to govern water use and protect the resource need to balance interests of household consumption, agriculture, fishery and industrial use, including the production of hydropower. Stakeholder participation, decentralization and partnerships can help to improve integrated water management.

51. Most of the Millennium Development Goals show a marked difference between urban and rural areas. For some indicators, such as the proportion of

⁵ Malaria estimates for 2006 have been substantially revised on the basis of extensive data compilation and analysis, new data and consultations with countries.

underweight children, this disparity has even increased. This development is linked to a rapidly growing population in urban centres, owing in part to an accelerated rate of rural-urban migration, which is more advanced in Asian least developed countries but is growing rapidly in Africa as well. The least developed countries will therefore need to take measures to prevent an increasing number of urban slum-dwellers and to avoid the deterioration of urban as well as rural service delivery.

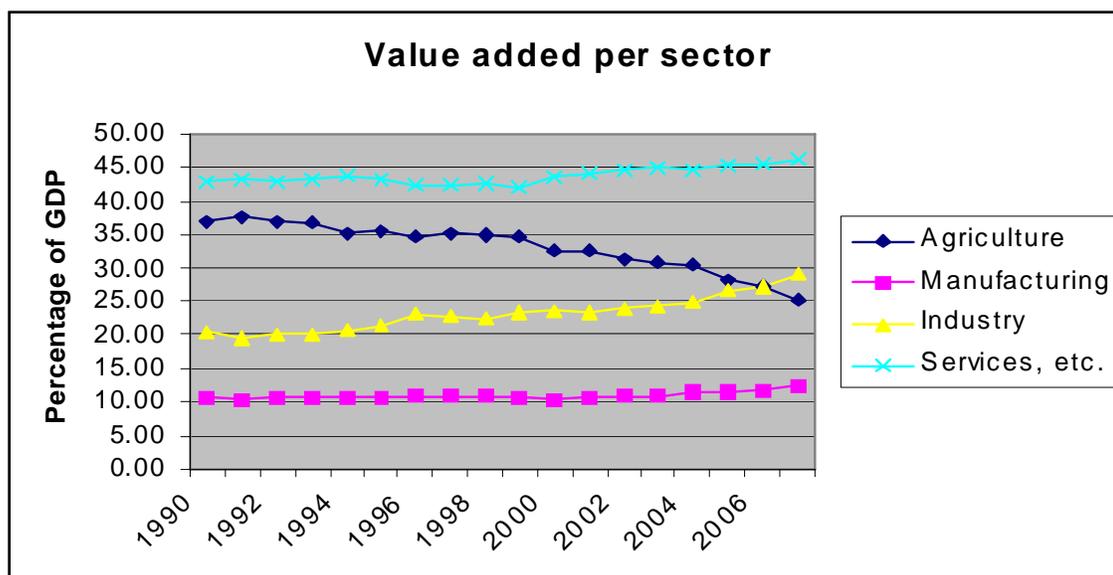

52. The strong links between the different social sectors need to be taken into account for accelerating progress towards achieving the Millennium Development Goals. For example, one third of all children in developing countries have experienced severe malnutrition before they enter primary school, with irreparable damage to their cognitive development. In many least developed countries in both Asia and Africa early childhood care and education programmes are not widespread, limiting the outcomes of schooling. Likewise, improved access to water and sanitation contributes significantly to better health outcomes as well as education, especially for girls.

53. It is clear that the Millennium Development Goals cannot be achieved globally without accelerated progress in the least developed countries. Thus, the Governments of the least developed countries and the international community need to step up efforts to increase resources and improve their allocation as well as the efficiency of targeted programmes.

Commitment 4

Building productive capacities to make globalization work for the least developed countries

54. One of the most striking features of the least developed countries is the lack of productive capacity and structural transformation needed to accelerate development, which was a central goal of the Brussels Programme. Changes in the sectoral composition of GDP have been much slower in the least developed countries than in other developing countries. In particular, the share of manufacturing, which has been the driving force of economic development in many middle-income countries, has increased only slowly. Only seven least developed countries had a share of manufacturing in GDP of more than 15 per cent, four of which are in Asia. Moreover, the declining share of agriculture is driven by the Asian countries and some African oil exporters, whereas in many other African least developed countries the share of agriculture in GDP has actually increased over the last decade.

Source: World Bank, World Development Indicators online, 2009 (accessed on 26 March 2010).

55. Agricultural productivity in most least developed countries is very low owing to underinvestment, abolishment of support systems, including input subsidies and extension services, and limited availability of credit, which resulted in declining land fertility and crop quality. Even during the price hikes in 2007 and 2008, most farmers were not able to benefit and investment was not significantly increased.

56. In addition, agricultural policies have failed to adequately address the predominant role of women in the sector, who are at the forefront of food production, processing and distribution in least developed countries and represent most of the agricultural workforce, and of the rural population. Rural women, in particular, continue to face daunting discrimination with regard to access to and control over such productive assets as capital, land, labour-saving technology, equipment and extension services.

57. **As agriculture still plays a crucial role in almost all least developed countries, a broad consensus has emerged in the last few years that it needs to receive higher priority, reflected in higher shares of public investment and aid to the sector and the implementation of institutional reforms, including land rights. Access to inputs, such as seeds and fertilizer, needs to be increased. Additional measures include new investment in enhancing capacities of small farmers, more efficient water management technologies, restoration of soil nutrients, more stress-resistant agricultural varieties and market opportunities for small farmers. The \$20 billion over three years pledged for food security by the Group of 8 and the Group of 20 in 2009 should be provided urgently, with a significant share allocated for least developed countries to initiate the implementation of the Comprehensive Framework for Action, adopted by the High-level Task Force on Food Security.**

58. The least developed countries on average have increased manufacturing output, albeit from very low levels and concentrated towards Asian countries. In

sectoral terms, the best performance has been in apparel, textiles, leather and tobacco products. These are mainly light manufacturing, low technology products, which account for more than 90 per cent of all manufactured exports from the least developed countries. Technology acquisition to meet quality standards is a prerequisite for agroprocessing.

59. The services sector has grown in importance in several least developed countries. For example, in Bhutan exports of hydropower to India now account for 30 per cent of total foreign exchange earnings. A number of least developed countries are specializing in tourism and some in transport-related services. However, the effects of these specializations on the population vary substantially, with little effect from hydropower exports and mixed effect from tourism. The United Republic of Tanzania is an example where the hospitality industry has developed close linkages with local suppliers, creating a multiplier effect.

60. As diversification into higher value-added products with growing demand has been very limited in most least developed countries, a renewed focus is needed on more active State policies to promote structural transformation and the development of productive capacities. These policies need to be tailored to specific sectors with competitiveness potential in each country.

61. In an increasingly knowledge-based global economy, skills development, especially related to technology, is becoming a crucial strategy to tackle youth unemployment. However, vocational training in many least developed countries largely focuses on the formal sector, whereas the informal sector provides most opportunities, especially for youth. In addition, the quality of the training is weak, as there is not enough focus on practical experience and such complementary skills as basic accounting.

62. Another prerequisite for growth and structural transformation is investment. Despite the fact that 17 least developed countries reached the target of 25 per cent of GDP as gross fixed capital formation, the average investment ratio increased only slowly from 18.7 per cent in 2000 to 21.3 per cent in 2008, as compared to 29.3 per cent for all developing countries. This confirms the importance of addressing the weakness of domestic financial institutions and revising monetary policy to support investment-focused fiscal policy.

63. Total net foreign direct investment (FDI) inflows to least developed countries increased from \$4.1 billion in 2000 to \$33.1 billion in 2008. Net FDI as a percentage of GDP into least developed countries increased substantially from 2.2 per cent in 2000 to 6.5 per cent in 2008. FDI exceeded 5 per cent of GDP in 20 countries. Thus, FDI remains highly concentrated in countries with potential for resource extraction, with only 12 oil- and mineral-exporting least developed countries accounting for about 76 per cent of total inward flows to least developed countries. These countries were the first to be affected by the financial crises through large drops in commodity prices in the second half of 2008. Only a few countries have managed to attract FDI in manufacturing.

64. One area where investment is needed most is infrastructure, in order to reduce production costs, enable diversification into higher value-added products and strengthen supply-side capacities. This applies especially to energy and transport infrastructure. In those least developed countries where GDP growth was high, demand for electricity has been increasing by more than 10 per cent annually over

the past decade. This has increased the strain on the provision of electricity and caused increasing shortages, power outages and rationing, exacerbated by drought in countries with high reliance on hydropower.

65. With regard to transport infrastructure, the total road network expanded in 13 least developed countries but declined in 5. For railways and air transport, data availability is even more sketchy and no positive trend can be observed. **Thus, Governments and donors need to pay more attention to maintaining and expanding transport networks, including the connection of missing links and favouring multimodal transport infrastructure approaches, which are crucial for interregional and international trade expansion.**

66. While indicators related to more traditional means of communication, such as postal services and fixed-line subscribers, are stagnating or only progressing slowly, there has been rapid progress in access to mobile phones and the Internet. The percentage of mobile telephone subscribers continues to increase in most least developed countries, from an average of 2.8 mobile subscribers per 100 inhabitants in 2004 to 20.9 subscribers per 100 inhabitants in 2008, and has not been affected by the economic crisis. The number of Internet users has increased more slowly, from 0.6 per 100 inhabitants in 2004 to 2.1 per 100 inhabitants in 2008, but has reached 4.1 per 100 inhabitants in the Pacific. The interest of foreign investors in the market for mobile phones in the least developed countries also continues. For example, Bharti Airtel, an Indian operator, is bidding for Zain's Africa operations (including nine least developed countries), bringing its experience in serving low-income customers. The mobile money services provided by Zain will provide Bharti with experience it might transfer to India.

67. **To achieve the necessary scaling up of infrastructure provision, all stakeholders in the least developed countries and development partners need to work together, including sharing of best practices in public-private partnerships for infrastructure development. In addition, a regional approach to the provision of infrastructure would help to overcome bottlenecks and increase efficiency.**

68. **To improve productive capacity, most least developed countries would need to adopt sector-specific development policies focusing on agriculture, services and industrial transformation. Such policies need to be supported by macroeconomic policies, financial sector development, including microcredit, and a business environment that focus on employment creation and entrepreneurship. The financial and economic crisis reaffirmed the vital role Governments need to play in cushioning against external shocks and increasing resilience through restructuring the economy.**

69. **Global support for private FDI is also needed, especially in infrastructure development and other priority areas, including bridging the digital divide. The global support can take various forms, including export credits, co-financing, venture capital and other lending instruments, risk guarantees, leveraging aid resources, business development services and funding for feasibility studies. Furthermore, bilateral and multilateral partners should support least developed countries in attracting FDI by providing insurance to offset their high perceived political risk. FDI incentives by home countries to match measures taken by least developed countries for attracting inflows and targeting them to priority sectors should be encouraged.**

Commitment 5

Enhancing the role of trade in development

70. Given the small nature of domestic markets and the limited scope for intraregional trade, international trade plays an important role for development in the least developed countries. Increasing their openness to international trade and investment has been a dominant feature of economic reforms undertaken over the last two decades. The value of merchandise exports, in nominal terms, rose from \$83.3 billion in 2005 to \$172 billion in 2008. Similarly, imports grew remarkably from \$88 billion to \$153 billion over the same period. Thus, the trade balance improved from a negative \$4.5 billion in 2005 to a positive balance of \$19 billion in 2008.

71. However, this improved trade performance only occurred in a few least developed countries and was largely driven by the surge in commodity prices, with oil and mineral prices rising significantly. The collapse in commodity prices from mid-2008 to mid-2009 is estimated to have cut the volume of world trade by 12 per cent in 2009, with a somewhat smaller decline in the least developed countries. While the share of least developed countries in global merchandise trade increased from 0.62 per cent in 2002 to 1.08 per cent in 2008, the share of the non-oil exporting countries only increased from 0.37 per cent to 0.4 per cent during the same period. Moreover, the share of least developed countries in trade in services remained largely static, hovering around 0.04 per cent over the period from 2002 to 2007.

72. Thus, the limited export performance of the least developed countries is related to their high concentration, with the top three export products accounting for an average 70 per cent of merchandise exports. Some have managed to achieve diversification into manufacturing (especially in Asia) and horticultural products, including fresh flowers, plants, fruits and vegetables as well as exports of fish and fishery products. The least developed countries have also begun to witness some diversification in their market base. By 2008, less than 50 per cent of least developed countries' exports were destined for the European Union and the United States of America, whereas the share of exports to other developing countries rose to around 50 per cent.

73. Least developed countries' exports benefit from a number of preferential trading schemes, such as the European Union's Everything But Arms initiative, which provides duty-free, quota-free market access to all products from all least developed countries. Since September 2009, the initiative has been fully implemented as imports of rice and sugar have been liberalized. Switzerland has also been providing duty-free, quota-free market access to all products from the least developed countries since September 2009.

74. Other initiatives include the United States African Growth and Opportunity Act for most African countries and the Caribbean Basin Initiative, which covers Haiti. Other developed countries, including Australia, Canada, Japan, New Zealand and Norway also accord preferential treatment for products originating in the least developed countries. Most of these countries, with the exception of one, meet the duty-free, quota-free market access threshold of 97 per cent of products originating in least developed countries.

75. African and island least developed countries enjoy better market access conditions, with nearly all their exports to developed countries entering duty-free, compared to Asian least developed countries, with only two thirds of their exports enjoying duty-free treatment. This is due to the high levels of tariffs on clothing and textiles applied in the United States market. **Further efforts by developed countries are required to achieve the objective of duty-free and quota-free market access for all least developed countries' exports.**

76. A number of developing countries, such as China and India, have also been providing preferential treatment to least developed countries' products. Brazil announced during the Seventh World Trade Organization Ministerial Conference, in December 2009, that it would provide duty-free, quota-free market access to least developed countries' products, initially covering 80 per cent of tariff lines by mid-2010, with the intention to expand it to 100 per cent. Turkey provides duty-free, quota-free access for most least developed countries' products in line with the Everything But Arms initiative, as it is in a customs union with the European Union.

77. Despite benefiting from preferential trading arrangements, the least developed countries have not been able to fully utilize these benefits. This is mainly due to stringent rules of origin applied by developed countries together with least developed countries' weak supply capacity. The World Trade Organization Hong Kong Ministerial Conference called upon developed countries to ensure that preferential rules of origin applicable to imports from least developed countries are simple and transparent, and contribute to facilitating market access. The Canadian preference scheme for least developed countries is regarded as a model, as its rules of origin mainly provide for one simple method to determine origin, except for textiles and clothing. Least developed countries' exports are granted duty-free, quota-free access if at least 40 per cent of the ex-factory price of the goods shipped to Canada originate in one or more least developed countries or Canada. The European Union is currently reforming its rules of origin.

78. Efforts are also being made to strengthen least developed countries' supply capacity through the Aid for Trade initiative. Two global reviews of the initiative were organized in 2007 and 2009, which raised awareness about the barriers against least developed countries' beneficial integration into the world economy and the support they need to overcome their supply-side constraints. Aid for Trade flows to least developed countries grew from \$3.9 billion in 2000 to \$10.5 billion in 2008, amounting to around a quarter of total Aid for Trade commitments.⁶ This plays an important role in complementing trade-related and other capacity-building programmes, including the Enhanced Integrated Framework. At present, 47 least developed countries are at different stages of their Framework process. Thirty-five have completed their Diagnostic Trade Integration Studies.

79. A timely and development-oriented conclusion of the Doha Round would be an important step to improve trade-related support for the least developed countries. At the Seventh Ministerial Conference, World Trade Organization members underlined that development should remain central to the Round and that least developed country-specific issues needed particular attention. They also reaffirmed the need to conclude the Doha Round in 2010. In particular, the full implementation of duty-free, quota-free market access by developed

⁶ In 2006 constant prices and exchange rates.

countries and developing countries in a position to do so, as agreed in the Hong Kong World Trade Organization Ministerial Declaration, is critical to integrating beneficially into the global trading system. More transparent and simplified rules of origin, allowing for regional and South-South cumulation of origin, could improve the use and value of preferences, as would more comprehensive product coverage. Least developed countries should be granted greater preferential treatment than other countries to enable them to offset some of their disadvantages.

80. Developed countries also need to honour the 2005 pledge to eliminate, by 2013, all export subsidies, including on agriculture, which remain a major distortion affecting trade and farm production in developing countries. Even though overall agricultural support in relation to GDP of developed countries declined further, it remained high in absolute terms and in relation to aid.

Commitment 6

Reducing vulnerability and protecting the environment

81. The least developed countries emit far fewer greenhouse gases per capita than others and therefore contribute the least to climate change, while they are more vulnerable to its effects, such as a rise in sea level in some areas and drought in others. This vulnerability will be increased because agriculture, the sector most affected by climate change, accounts for such a large proportion of their economies, especially in terms of employment. In addition, the least developed countries have the least capacity to adapt to climate change.

82. Already over a billion hectares of drylands in African least developed countries are affected by desertification, with estimated losses of around \$9 billion per year as a result. Desertification has also played a role in sparking off several of the current armed conflicts in progress, in particular in Africa, as it has contributed to political instability and social breakdown. Climate change is further aggravating the situation, as the least developed countries have limited capacity to manage its desertification consequences. The United Nations Convention to Combat Desertification is supporting most least developed countries in the process of mainstreaming their national action programmes to combat desertification and drought. These are the policy frameworks at the national level to stop, reverse and reduce the impacts caused by land degradation.

83. At the United Nations Climate Change Conference, held in Copenhagen in December 2009, the parties agreed that enhanced action and international cooperation on adaptation is urgently required to ensure the implementation of the United Nations Framework Convention on Climate Change by enabling and supporting the implementation of adaptation actions aimed at reducing vulnerability and building resilience in developing countries, especially in least developed and other vulnerable countries. Furthermore, they agreed that developed countries shall provide adequate, predictable and sustainable financial resources, technology and capacity-building to support the implementation of adaptation action in developing countries.

84. As of April 2010, 41 industrialized countries have formally communicated their economy-wide targets for the reduction of emissions, as agreed at the Conference in Copenhagen. In addition, 35 developing countries, including 11 least

developed countries, have announced nationally appropriate mitigation actions they are planning to take, including the reduction in emissions from deforestation and forest degradation, provided they receive the appropriate support in terms of finance and technology. In this context, Sierra Leone is stepping up its efforts to enhance the sustainable management and protection of forest reserves and catchment areas, expand clean energy utilization and improve waste management.

85. Developed countries committed to a goal of mobilizing jointly \$10 billion a year until 2012 and \$100 billion a year by 2020 to address the needs of developing countries. This funding will come from a wide variety of sources, public and private, bilateral and multilateral, including alternative sources of finance. Regarding new multilateral funding for adaptation, the parties agreed that it will be delivered through effective and efficient fund arrangements, with a governance structure providing for equal representation of developed and developing countries. **They also agreed that a significant portion of such funding should flow through the Copenhagen green climate fund. It needs to be ensured that the least developed countries have a strong voice in the allocation of these resources and receive a share reflecting their high vulnerability. Furthermore, these funds need to be additional to other development aid commitments. The Secretary-General has established an Advisory Group on Climate Change Financing, co-chaired by the Prime Ministers of the United Kingdom of Great Britain and Northern Ireland and Ethiopia, that will submit modalities for creation of the Fund.**

86. **The very fact that the challenges of poverty, food, energy, global recession and climate change are all interrelated has presented the global community with a unique opportunity to tackle them together. A “green new deal for least developed countries” requires that large public investment in renewable energy be made urgently in order to achieve economies of scale. In addition, policies, skills and incentives need to be developed to encourage private investment in environmentally friendly and climate-friendly businesses, such as energy efficiency, sustainable transportation and greening of commodity supply chains. Apart from benefiting the poor, such investment would also provide the basis for sustainable development, stimulate complementary investment in infrastructure and agriculture, and help raise agricultural productivity, thus enhancing food security and creating decent jobs for the rural poor.**

Haiti: Build Back Better

87. The earthquake which hit Haiti in January 2010 not only left at least 200,000 people dead, 300,000 injured and around 2 million displaced, causing tremendous human suffering, but also devastated the economy, with the physical infrastructure largely damaged. It is estimated that the earthquake could have caused a loss equivalent to more than 50 per cent of Haiti's GDP. The earthquake came after a year of heavy destruction by four hurricanes, with damage equivalent to about 15 per cent of GDP. The functioning of public institutions, which was weak before the disaster, has been affected by the destruction of public registries and infrastructure.

88. Donors reacted quickly with relief operations and funding, and several agencies waived debt payments within days. The Government of Haiti also received \$7.75 million from the Caribbean Catastrophe Risk Insurance Facility, which is

about 20 times the annual premium. Although the amount is relatively small, it can be used according to Government priorities. The Facility provides Governments with immediate liquidity after being hit by a natural disaster. The pooling of risks among members lowers the cost of coverage by around 40 per cent. This provides a best practice example for insurance schemes in other regions.

89. The International Donors' Conference Towards a New Future for Haiti pledged more than \$9 billion for short- and long-term recovery. **It is crucial that the international community honour this commitment and that it be delivered in a manner that strengthens the authority of the State, build the capacity of local and national institutions, use Haitian firms and workers whenever possible and increase resilience to future shocks.**

Commitment 7

Mobilizing financial resources

90. Since the adoption of the Brussels Programme, the least developed countries have made considerable efforts to mobilize domestic resources for their development so as to ensure the sustainability of funding for national development priorities. However, their domestic savings stagnated around 13 per cent of GDP. Only the oil-producing countries experienced significant growth in domestic savings. By contrast, some post-conflict countries experienced negative savings rates. Thus, most least developed countries still face a huge financing gap, which is likely to have increased in 2009 on account of the current global financial and economic crisis.

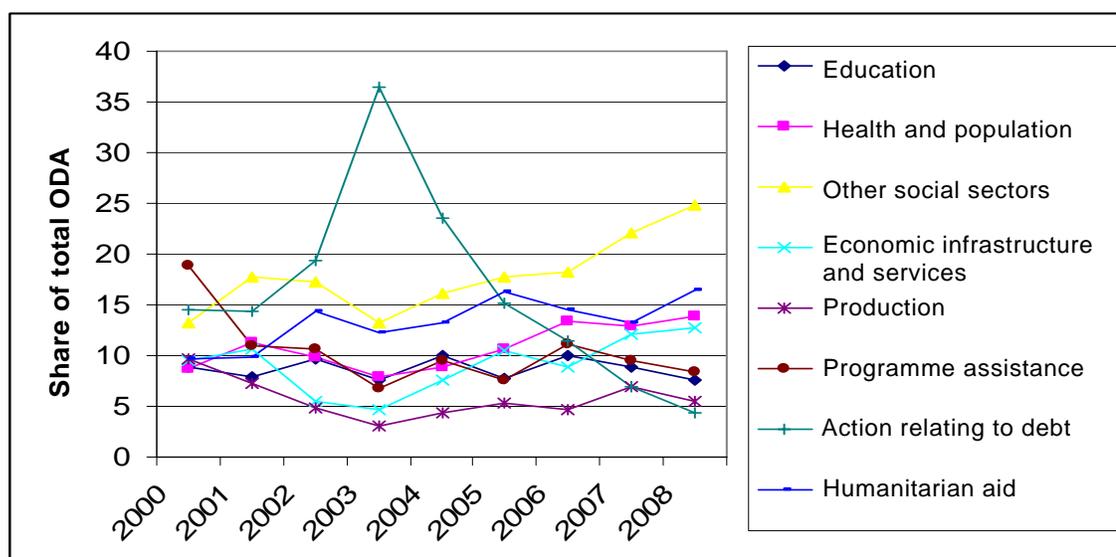

91. The least developed countries continued to rely on external financial resources, especially official development assistance (ODA) for their development. Net ODA flows to the least developed countries, excluding debt forgiveness and technical assistance, in terms of volume, increased from \$31.9 billion in 2007 to \$37.0 billion in 2008. Aid distribution to the least developed countries was uneven and some countries even experienced a decline in ODA in 2008. Total ODA as a percentage of gross national income (0.09 per cent), as measured by the Organization for Economic Cooperation and Development/Development Assistance Committee, is considerably below the target of 0.15 to 0.20 per cent. The number of donor countries providing 0.15 per cent or more of their gross national income in ODA to the least developed countries increased from seven in 2005 to eight in 2008. In 2009 total ODA from Development Assistance Committee donors increased slightly, despite the reduction in gross national income in most donor countries. However, some donors have reduced or postponed the pledges they made for 2010.

92. At the Group of 8 summit in Gleneagles, United Kingdom of Great Britain and Northern Ireland, developed countries committed to more than double ODA to Africa by 2010 relative to 2004, which would be an increase of \$25 billion. Given that two thirds of the least developed countries are in Africa, delivering on this commitment would enhance their development prospects considerably. In 2009 net bilateral ODA to Africa in real terms only increased by 3 per cent over 2008 and it is likely that only about half of the promised increase will be delivered. **Developed countries should make efforts to increase aid to the least developed countries faster, to help them deal with the impact of the global financial and economic crisis.**

93. Another important issue related to ODA is the sectoral allocation which has increasingly been directed towards social sectors, in part because of the focus on the Millennium Development Goals. However, in the last few years there has been a trend towards increasing aid to infrastructure and productive sectors.

Development Assistance Committee donors' bilateral ODA to the least developed countries by sector

(Millions of United States dollars)

Source: OECD/Development Assistance Committee, online databank, assessed on 30 March 2010.

94. To address large shocks, such as the global financial crisis, the International Monetary Fund (IMF) has established a new Poverty Reduction and Growth Facility for low-income countries, which has three new lending windows. Although there is a considerable difference between the least developed countries and low-income countries, many least developed countries are likely to face less conditionality and more flexibility in accessing financing through IMF. The new windows became effective in January 2010 and will provide support for medium-term balance-of-payments needs and for short-term financing and adjustment needs caused by domestic or external shocks, providing some insurance.

95. Remittances from migrants abroad have also become an important source of development finance for the least developed countries, financing consumption, including for health and education, and to a lesser extent small- and medium-scale enterprises. Remittance flows to the least developed countries increased from \$6.1 billion in 2000 to \$17.5 billion in 2007 and further to \$23 billion in 2008. They are estimated to have increased further in 2009, against the global trend.

96. Delivery of relief through the Heavily Indebted Poor Countries Initiative and the Multilateral Debt Relief Initiative resulted in the cumulative totals by the World Bank and IMF increasing only from \$36.7 billion up to February 2009, to \$38.8 billion by February 2010. The trend was similar among multilateral contributors under the Multilateral Debt Relief Initiative, with the cumulative total increasing only from \$15.4 billion in 2009 to \$16.0 billion in 2010. The number of

pre-completion point countries fell to eight in early 2009, mainly comprising countries experiencing significant social and political strife. The number of post-completion point countries reached 19 in 2010, up from 13 in 2006.

97. Debt service dropped significantly among the least developed countries from 2000 to 2008, with only 2 of 25 countries with data available devoting more than 20 per cent of export earnings and income from abroad in 2008, compared to 15 countries in 2000. The debt service percentage decreased from 2000 to 2008 in 17 countries and increased in 7 countries.

98. The importance of South-South cooperation in terms of resource flows, including aid, remittances and FDI, continues to grow. China is an important donor and, at the same time, investor in several least developed countries, including Cambodia and the Sudan. India is focusing its aid to least developed countries on technical cooperation and capacity-building ranging from information technology to vocational training. Turkey is becoming an important donor for some least developed countries and has increased its total ODA in 2009.

99. Donors should increase aid to least developed countries in line with international commitments to enable them to cope with the effects of the global financial and economic crisis. Better targeting of aid is required to support development of productive capacities, infrastructure, agriculture, the social sector as well as employment creation. Innovative sources of finance also need to be further explored.

100. To enhance the developmental impact of aid, efforts are required in the implementation of the Paris Declaration on Aid Effectiveness, including ownership, alignment, harmonization, mutual accountability and managing for results. These principles were reaffirmed in the Accra Agenda for Action, adopted at the Third High-level Forum on Aid Effectiveness in September 2008. This has been stressed in both the Asia-Pacific and Africa outcome documents of the regional reviews.

101. Furthermore, there is continued need for lasting and comprehensive debt relief for the least developed countries. Strengthened efforts are needed to ensure that recent gains under the Heavily Indebted Poor Countries Initiative and the Multilateral Debt Relief Initiative are not eroded. In addition, the international community must make efforts to address the debt problem of post-conflict countries, most of which are least developed countries, through fast-tracking their movement from pre-completion points to completion points.

III. Responses of the least developed countries to the financial crises

102. Overall, the least developed countries have mastered the effects of the financial and economic crisis better than expected, owing in part to their limited integration in global financial markets and to improved macroeconomic policies and the use of some stimulus programmes. However, despite the average positive growth rates in 2009, many least developed countries are still facing declines in household incomes, rising unemployment and the effects of declining Government revenues on social services. In the absence of social safety nets and very limited fiscal space to promote job creation and protect social spending, there is a high probability that the

crisis will hamper development prospects in the medium to long term and further jeopardize the attainment of the Millennium Development Goals.

103. The growth experience during the crisis within the group of least developed countries is very diverse. Oil- and mineral-exporting countries registered the sharpest decline in GDP growth, starting from mid-2008, driven not only by declining prices but also by lower production. By contrast, countries specialized in agricultural exports faced a much smaller decline in GDP. The picture for exporters of labour-intensive manufactures is mixed. For example, exports of clothing from Bangladesh were not much affected until mid-2009, as consumers in industrial countries shifted to cheaper products and producers were able to cut prices. However, towards the end of 2009, demand in major markets declined and competition from other low-cost garment producers increased, leading to a decline in textile exports and the closure of several factories.

104. As the financial and economic crisis came immediately after the food and energy crisis in 2007 and 2008, coping mechanisms of the poor had already been exhausted. These include reduced investment in education and selling of productive assets, and thus are likely to limit opportunities for development in the long run. Despite the decline from their peaks in 2008, food prices remained above their pre-crisis levels and in many domestic markets came down very slowly. In the last quarter of 2009 the cost of the food basket was still higher compared to long-term averages in a majority of countries. It is estimated that as a result of the economic crisis, the number of food insecure individuals has increased by about 9 per cent globally and this rate is most likely even higher in least developed countries.

105. Job losses owing to the crisis have been significant in several least developed countries. For example, in the Democratic Republic of the Congo at least 400,000 jobs in the mining industry had been lost by the first half of 2009 and in many countries manufacturing factories closed down completely, continuing the trend of deindustrialization, especially in such labour-intensive sectors as textiles, construction and tourism. Women have been disproportionately affected by job losses in export processing zones and in the tourism sector.

106. By contrast, agricultural employment tends to increase during crises, as job losses in cities and the subsequent return of unemployed individuals to rural areas provide a sort of informal safety net. However, this effect might further lower agricultural productivity, as during a crisis access to other agricultural inputs is unlikely to increase. There is evidence for this effect from Cambodia, where garment workers returned to the rural area after losing jobs in the city.

107. In many least developed countries the crisis triggered a stark increase in vulnerable employment and households that are poor despite having members who are working. Women and youth were most likely more affected by the increase in vulnerable employment, which is estimated to have risen to almost four fifths of the employed population. The decline in jobs and increase in vulnerable employment in turn is contributing to the dramatic increase in poverty.

108. In addition, already high constraints have increased for least developed countries in accessing international private capital markets. This is expected to continue in the medium-term owing to a general increase in risk aversion, the need of banks in high-income countries to rebuild their capital as well as higher capital costs. Thus, the least developed countries will need greater support from official

sources of international finance to sustain priority spending. While remittances declined on average as a result of job losses of migrants, in countries like Bangladesh and Ethiopia remittances actually increased in late 2008 and 2009. However, this was driven in part by the fact that return migrants transferred their savings to their home countries.

109. Countries with large current account deficits and low levels of foreign reserves were particularly affected by the financial crisis, as these deficits are paid for with inflows of capital, remittances, foreign aid and borrowing, which all dried up during the crisis. Greater regional cooperation could facilitate risk sharing by pooling reserves and thus strengthen South-South financial flows.

110. Policy options for most least developed countries to weather the effects of the financial crisis were limited. As inflationary pressures receded in most countries, many central banks eased monetary conditions, making monetary policies countercyclical. However, given the weak capital markets and financial intermediation in most of them, monetary policy only had a small effect towards economic recovery.

111. Reduced Government revenue combined with sustained or increased public spending and against a backdrop of falling external assistance in some countries increased budget deficits in most least developed countries. However, some fragile States in particular had subscribed for a cash budget and thus had very little flexibility to react.

112. Despite severe limitations, a number of least developed countries managed to put together fiscal stimulus packages through increased spending, for example, for infrastructure. Other least developed countries increased spending on agriculture, mainly for fertilizer and seeds, for example, in Burundi and Mali. Mali also removed import taxes on essential foodstuffs and temporarily reduced taxes on petroleum products.

113. The Central Bank of Bangladesh has taken measures to reduce interest rates and bank charges. The Government has also taken some fiscal measures, such as reduction in duties and taxes on exportables, tax relief for small- and medium-scale enterprises, VAT relief for some production items and tax holidays for agroprocessing industries. It announced a second fiscal stimulus package to support export-oriented industries in early 2010, after a decline of merchandise exports in the period from July to October 2009 compared to the previous year.

114. The Central Bank of the United Republic of Tanzania provided financial support to commercial banks facing balance-sheet problems in order to increase liquidity. The Tanzanian Government also sought to compensate crop buyers for losses incurred owing to the fall in demand and prices of commodities in the world market during the 2008/09 season. The package also included provision of working capital to investors at discounted rates.

115. Limited fiscal space has impeded the ability of least developed countries to increase social protection, but a significant number managed to increase it somewhat. Scaling up of school feeding and maternal and child feeding programmes has been a common response, in particular in countries that lack other direct transfer mechanisms. Many countries have expanded public works programmes, featuring either food or cash for work, or have initiated targeted cash transfer programmes,

sometimes in combination with youth employment programmes.⁷ A number of countries lacking large targeted programmes have sought to protect vulnerable groups by reducing import tariffs, VAT and other taxes on food grains, for example, Afghanistan, Burundi, Sierra Leone and Zambia.

116. The cuts in national budgets that have occurred despite the efforts to safeguard priority spending are affecting spending for social services. In African least developed countries a 10 per cent reduction in spending per primary school pupil is estimated for 2009 and 2010. A case in point is Zambia, where the crisis has resulted in a reduction in the number of students, with long-term effects on skills availability. However, other Millennium Development Goals have not been much affected by the crisis. For example, there is no evidence for an increase in underweight prevalence among children in least developed countries after the crisis.

117. The global recovery, which started in Asia, has led to a rebound in trade and industrial production. The resulting increase in the demand for primary commodities and world commodity prices will support the recovery of GDP growth in the least developed countries. However, many of them are expected to experience much slower economic performance in the coming years as compared to the pre-crisis decade, because investment has dropped significantly. This slowed growth may aggravate the already deteriorating fiscal balances and the rising public debt. However, some countries, such as Tuvalu, are developing debt risk management and mitigation policies to ensure all future borrowing is subject to a detailed process involving financial analysis, broad consultation and approval by Parliament.

118. In light of the devastating effects of the financial crisis, the global financial architecture needs to be overhauled. The failings of the financial sector require improved regulatory oversight and higher buffer capital requirements. There is also a need to make financial markets less volatile and more predictable and to take the particular vulnerabilities of the least developed countries into account. At the same time, these initiatives will need to be properly designed to ensure that they also help to boost both investment and private demand.

119. The significant setback of the financial and economic crisis for reaching the goals of the Brussels Programme, including the Millennium Development Goals, calls for effective strategies to build the resilience of the least developed countries to various types of shocks. Such strategies need to focus on capacity-building so as to increase the ability to deal with crises and on diversification so as to reduce vulnerability to price and demand shocks. Thus, support from the international community needs to be increased and made more flexible in order to allow for timely and adequate responses, including countercyclical measures. To prevent the long-term reduction of growth that may result from the crises, a global stimulus package for the least developed countries is still very urgently needed.

⁷ Countries stepping up social protection include Afghanistan, Angola, Bangladesh, Bhutan, Burkina Faso, Cambodia, Djibouti, Eritrea, Ethiopia, Haiti, Lesotho, Liberia, Madagascar, Maldives, Mauritania, Mozambique, Nepal, Sierra Leone, Togo and Zimbabwe.

IV. Conclusions and recommendations

120. One indicator for the limited success of the Brussels Programme is the low number of graduating countries. Only one least developed country (Cape Verde) has graduated from the group since 2001. Two more countries are scheduled to graduate before the Fourth Conference in 2011. The United Nations system and other international development partners actively support graduating countries in aiming to secure a “smooth transition” from least developed country to post-least developed country status. For instance, the European Union decided in 2008 that every graduating country would continue to enjoy duty-free, quota-free access to its market for a period of at least three years from the date of graduation. Maldives, which is expected to exit the least developed country category in January 2011, will benefit from this smooth transition-related policy and is negotiating similar concessions with other partners. However, the Africa Outcome Document highlights that countries nearing the graduation threshold are concerned about the post-graduation uncertainty and abrupt disruption of international support measures, including ODA, market access, special and differential treatment, and trade-related capacity-building. **It argues that enhanced measures should be considered to ensure the effective and smooth transition of graduating countries so as to avoid the disruption of development efforts of graduating States.**

121. **Progress towards the goals of the Brussels Programme is now threatened by slow economic growth, diminished resources, fewer trade opportunities and possible reductions in aid flows from donor nations. At the same time, the effects of climate change are becoming increasingly apparent, with a potentially devastating impact on the least developed countries. In such a context, the commitments to building a global partnership for development embodied in the Brussels Programme need to be reaffirmed and strengthened.**

122. **As timely and reliable data are a precondition for both policy planning and monitoring of results, more attention of Governments and donors should focus on the development of sustainable statistical systems. As the Dakar declaration on the development of statistics of November 2009 reaffirmed, all countries must be encouraged and supported to define their own priorities, integrating user needs, and set out their own pathways for statistics, from collection to dissemination. Efforts to improve statistics should support, strengthen and sustain the institutions and agencies that make up national statistical systems.**

123. **Gender needs to be further mainstreamed in a future development partnership between the least developed countries and their development partners. Positive action to improve the numbers and influence of women in all political decision-making should be introduced, including by investing in women’s leadership in local decision-making structures. Women’s work burden must be reduced through investment in infrastructure, labour-saving technologies and gender-responsive economic stimulus packages. Investments for gender equality must be scaled up, including by institutionalizing “gender-responsive budgeting”, as part of public financial management reforms as well as in ODA allocation to ensure that financial commitments advance gender equality.**

124. Least developed countries need policy space in a broad range of areas, including fiscal, trade and macroeconomic policy, to be able to pursue their development goals. Because of externalities, missing institutions and other types of market failures, markets cannot be relied on to bring about structural change and kick-start the development of dynamic sectors. For example, the least developed countries need to be able to protect infant industries, use subsidies, especially in agriculture, either for agricultural inputs or guaranteed prices for farmers and subsidies for poor urban consumers, use countervailing duties for subsidized imports from other countries, give preferential treatment for sectors with a competitive potential and improve fiscal space to deal with external shocks. The growing heterogeneity among the least developed countries makes it evident that policies need to be tailored to country circumstances.

125. The Fourth Conference needs to focus on the specific vulnerabilities of least developed countries, many of which have been discussed in the present report. This includes the strengthening of a developmental State, with adequate capacities to design and implement a long-term development strategy as well as concrete measures to address country-specific vulnerabilities from the high concentration of production and exports, dependency on external resources, low human capital and high risks from external shocks, including from climate change.

126. Especially during the preparations for the Fourth Conference least developed countries' concerns need to be given greater attention in relevant international forums, in particular at the High-level Plenary Meeting on the Millennium Development Goals in September 2010.

127. Additional financial resources, among other things, are needed to ensure the full participation of the least developed countries' constituencies, including parliaments, civil society, non-governmental organizations and the private sector in the preparatory process and the Conference itself.

128. The organizations of the United Nations system should provide necessary support and actively contribute to the preparatory process and to the Conference itself, especially through pre-Conference and parallel events on topics of high relevance for the least developed countries. There is also a need to intensify public information efforts and other appropriate initiatives in order to enhance public awareness in favour of the Conference, including by highlighting its objectives and its significance.

Annex

Least developed countries: statistical data

About the data

1. In 2004 indicators were selected and agreed by the Economic and Social Council to track as closely as possible progress in achieving the objectives and targets of the Brussels Programme. They form the basis for the present tables, published annually since 2007. As requested by the General Assembly, the Economic and Social Council and the Statistical Commission (see, for example, General Assembly resolutions 57/270 B and 58/291), the indicators on implementation of the Brussels Programme have been made fully consistent with the Millennium Development Goals indicators.

2. The tables have largely been compiled from official, published international sources by the Office of the High Representative for the Least Developed Countries, Landlocked Developing Countries and Small Island Developing States. The published sources are cited with each table. As national data sources have been improved, international estimates are less frequently used, except to adjust national data for comparability. Where sources have made retrospective adjustments to data, the newer data have been incorporated in the tables. Some data may therefore differ from those published in previous years in the report on implementation of the Programme of Action.

3. Large investments in data programmes by national and international statistical services are yielding rich new data stores in such important areas as HIV/AIDS and tuberculosis, infant and child mortality, education and literacy, international debt and merchandise trade. In addition, important new estimates on poverty and nutrition have become available from the World Bank, the Food and Agriculture Organization of the United Nations and the United Nations Children's Fund in the past year and are included in the present tables.

4. Where shown, totals and means for the least developed countries and developing regions are weighted by absolute numbers of population or economic variable used in the denominator.

Explanatory notes

5. Years separated by a hyphen (such as 1995-2000) normally indicate data based on averages in the period shown, but in some cases indicate a change over the period. Years separated by a slash (such as 2000/07) indicate that data are shown for the latest year available in the period or, in the case of years before 2000, a midpoint where data are available within the period indicated.

6. Figures may not add to totals owing to rounding.

7. A dash indicates data are not available.
